

Toxins Statement

(This statement does not expire and will only be updated if changes are required)

To All Graceland Fruit Customers,

This statement is to verify the absence of Aflatoxins, Mycotoxins and Orchratoxins in Graceland Fruit, Inc. infused dried fruits products. These toxins are generally more of a concern in grains, feeds, nuts, dairy, spices, and suspected moldy product.

Graceland utilizes raw materials that are allergen and toxin free, processing them under good manufacturing practices. Typically the water activity (Aw) of our dried product is <0.60 providing a shelf stable product that will prevent any mold growth. Additionally, the acidity of the fruit and infusion syrup combined with product drying temperatures ranging from 150-200° F. for 1-5 hours creates a final kill step for any micro or toxin growth.

If you have any questions contact either your Broker or our Customer Service Department.

Respectfully,

Christopher J. Oberski
